

Cuyamaca Rancho State Park

Our Mission

The mission of California State Parks is to provide for the health, inspiration and education of the people of California by helping to preserve the state's extraordinary biological diversity, protecting its most valued natural and cultural resources, and creating opportunities for high-quality outdoor recreation.

California State Parks supports equal access. Prior to arrival, visitors with disabilities who need assistance should contact the park at (760) 765-3020. This publication is available in alternate formats by contacting:

*Hidden waterfalls and
more than 100 miles of
trails through forest
and meadow silently
witness the regrowth of
Cuyamaca Rancho
State Park.*

East of San Diego, Cuyamaca Rancho State Park offers respite from the dry Southern California landscape.

The park's 24,700 acres of oak and conifer forests and expansive meadows are broken by running streams.

Located in the Peninsular Range of mountains, Cuyamaca Peak, at 6,512 feet, is the second

highest point in San Diego County. From the peak, visitors can see Anza-Borrego Desert State Park to the east or the Pacific coastline to the west. Over half of the park's acreage is designated as state wilderness.

HISTORY

Native People

The ancestors of today's Kumeyaay Indians occupied the Cuyamaca mountains from antiquity into the historic period. Their village sites are located throughout the

Spring wildflowers bloom in expansive meadows.

state park, including *Ah-ha' Kwe-ah-mac'* ("what the rain left behind"), *Iguai'* ("the nest"), *Wa-Ku-Pin'* ("warm house"), *Mitaragui'* ("crooked land"), *Pilcha'* ("basket bush") and *Guatay'* ("big house"). Historic mention of the Cuyamaca Kumeyaay begins in 1782 when Spanish Lt. Col. Pedro

Fages noted that the villagers "approached me very pleasantly and I gave them some beads." However, the Kumeyaay did not want to give up their independence, and resisted missionization. In 1837 a Mexican expedition attacked the villagers of *Ah-ha' Kwe-ah-mac'* after the Kumeyaay raided two ranchos to the south, eventually exacting a promise from the Kumeyaay to leave the settlers alone.

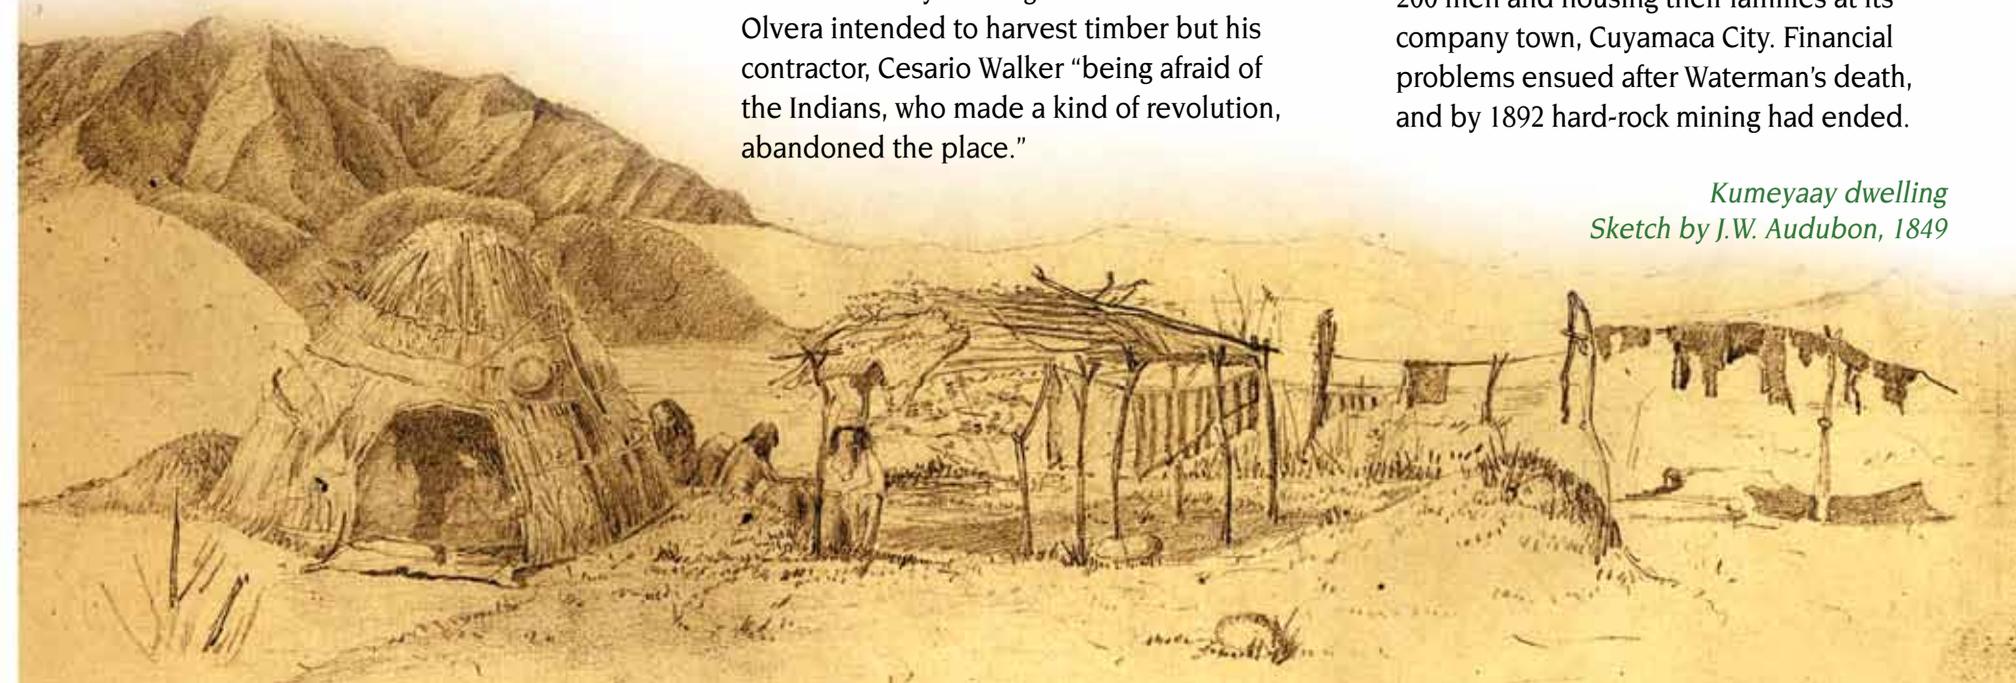

Augustin Olvera of Los Angeles obtained the Rancho Cuyamaca grant in 1845. Olvera intended to harvest timber but his contractor, Cesario Walker "being afraid of the Indians, who made a kind of revolution, abandoned the place."

By 1857, few Kumeyaay remained. James Lassator reportedly bought 160 acres in Green Valley from the last hereditary chief of the region. Lassator's family maintained a home, hay fields and a way-station there, supplying those using the area's early overland trails until after his death in 1865.

Gold Mining in Cuyamaca

The 1869 discovery of gold near today's town of Julian triggered a brief but frenzied rush to the Cuyamaca mountains. The southernmost and most profitable of the mines was the Stonewall, located south of the Laguna Cuyamaca. By 1872, this profitable hard-rock mine supported a permanent worker's camp and mill. In 1886 mining entrepreneur and soon-to-be California Governor Robert W. Waterman purchased and expanded the Stonewall's operations. At its peak from 1886 to 1891, the mine produced over 7,000 pounds of gold while regularly employing 200 men and housing their families at its company town, Cuyamaca City. Financial problems ensued after Waterman's death, and by 1892 hard-rock mining had ended.

*Kumeyaay dwelling

Later owners separated remaining gold from previously milled ore tailings with cyanide leaching until final closure in 1906. After the miners left, Cuyamaca City continued for several years as a mountain resort.

Becoming a State Park
Capitalist Ralph M. Dyar bought the rancho in 1923, along with partners planning resort development for the lakefront's northern half. Dyar also built his family a beautiful

second home in Green Valley, using local stone and salvaged materials from the Stonewall Mine ruins. The Dyar House later served as park headquarters and visitor center until the 2003 Cedar Fire reduced it to ruins.

The Great Depression ended Dyar's development plans; in 1933 he sold the property to California for its new State Park System. Cuyamaca Rancho State Park was doubly benefited in the 1930s by the placement of two Civilian Conservation Corps (CCC) camps that provided National Park Service designers and CCC labor to develop the park's initial and distinctive "park rustic" facilities, including many of today's popular campgrounds and trails.

The scars of the Cedar Fire may be visible, but recreation opportunities still abound.

NATURAL HISTORY

The Cedar Fire

On October 25, 2003, a lost hunter lit a signal fire, hoping to be found. That signal fire quickly burned out of control and became the biggest wildfire in California's recorded history. The fire took nearly two weeks for containment and burned a total of 280,278 acres, including 90% of Cuyamaca Rancho's 24,700 acres.

Reforestation

The slow rate of forest regeneration has prompted a reforestation project to replant a portion of the park

using grants and donations from private companies.

Severely burned areas may take years to regenerate, but grasses, shrubs and some conifers have already begun the recovery process.

Wildfires are still a threat. Please be careful to observe the park rules regarding fires, and report any fires you see to the nearest ranger station.

Vegetation and Wildlife

Today the rich forest lands at Cuyamaca Rancho are returning at a slow rate.

The trees include magnificent oaks, willow, alder and sycamore. Conifers like incense cedar, white fir and Coulter, sugar, ponderosa and Jeffrey pine are also making a comeback.

You may see a gray fox, badger, bobcat or mountain lion. Park amphibians include the Pacific and the canyon tree frogs, and reptiles like the mountain king snake, striped racer and rattlesnake.

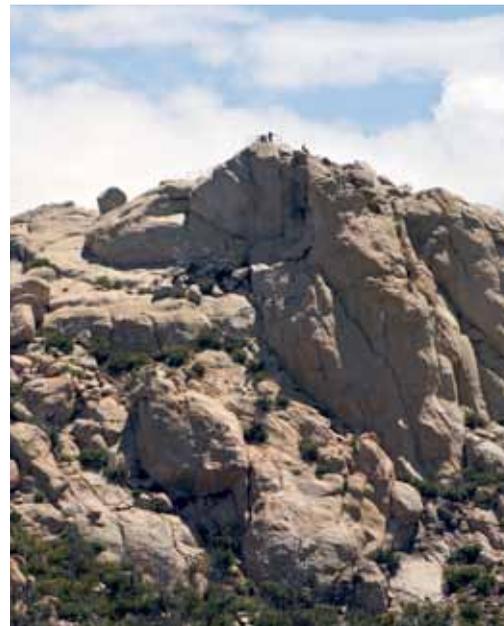

More than 100 bird species live in the area, including acorn woodpeckers, northern flickers, redtailed hawks and sage sparrows. A bird list is available at park headquarters.

RECREATION

Trails—Cuyamaca Rancho State Park has more than 100 miles of riding and hiking trails. The popular 3.5-mile hike up Lookout Fire Road to Cuyamaca Peak offers spectacular 360-degree views of the ocean, the desert, the Salton Sea and across the border into Mexico. The 2-mile trail to the top of Stonewall Peak—only moderately difficult

Stonewall Peak offers panoramic summit views.

due to many switchbacks—climbs from 4,800 to 5,700 feet in elevation to overlook the old mine site. The nine-mile Harvey Moore Trail is a difficult hike beginning near the Sweetwater River Bridge north of Green Valley. The round trip takes eight hours. The restored Paso Picacho Self-Guided Nature Trail gives a brief overview of the role of change in nature. The visitor center has hiking trail maps available.

Interpretive programs—The Stonewall Mine site exhibits a pictorial history of this Southern California gold mine. The park's visitor center features regional plant and animal exhibits; it also describes Kumeyaay native life before European settlement.

Picnicking—Developed picnic areas at Paso Picacho and Green Valley have tables, barbecue stoves and accessible restrooms. The group picnic area at Paso Picacho will accommodate up to 75.

Camping—Family campsites with tables and fire rings are available, with accessible restrooms nearby. Trailers are limited to 30 feet long. Motor homes up to 24 feet may use Paso Picacho; Green Valley fits RVs up to 27 feet. Six rudimentary camping cabins with wooden bunks and nearby restrooms at Paso Picacho are reservable year-round.

Equestrian groups may camp at Los Vaqueros Group Horse Campground, near the California Riding and Hiking Trail. Sixteen developed sites have metal corrals.

Primitive trail camps are located at Granite Springs and Arroyo Seco, with family campsites for up to eight people. A group site will accommodate up to 16 people.

Horse corrals are available, but equestrians should pack in feed because grazing is not allowed. To use the trail camp, register at park headquarters, the Paso Picacho contact station, or the Green Valley campground. Primitive sites are located in an unlighted, remote area, so check in with enough time to reach your campsite well before dark.

Reserve cabins and campsites by calling (800) 444-7275 or visit the park's website at www.parks.ca.gov.

Horse trails and camping facilities make this area ideal for equestrian recreation.

Camping cabins are available by reservation.

ACCESSIBLE FEATURES

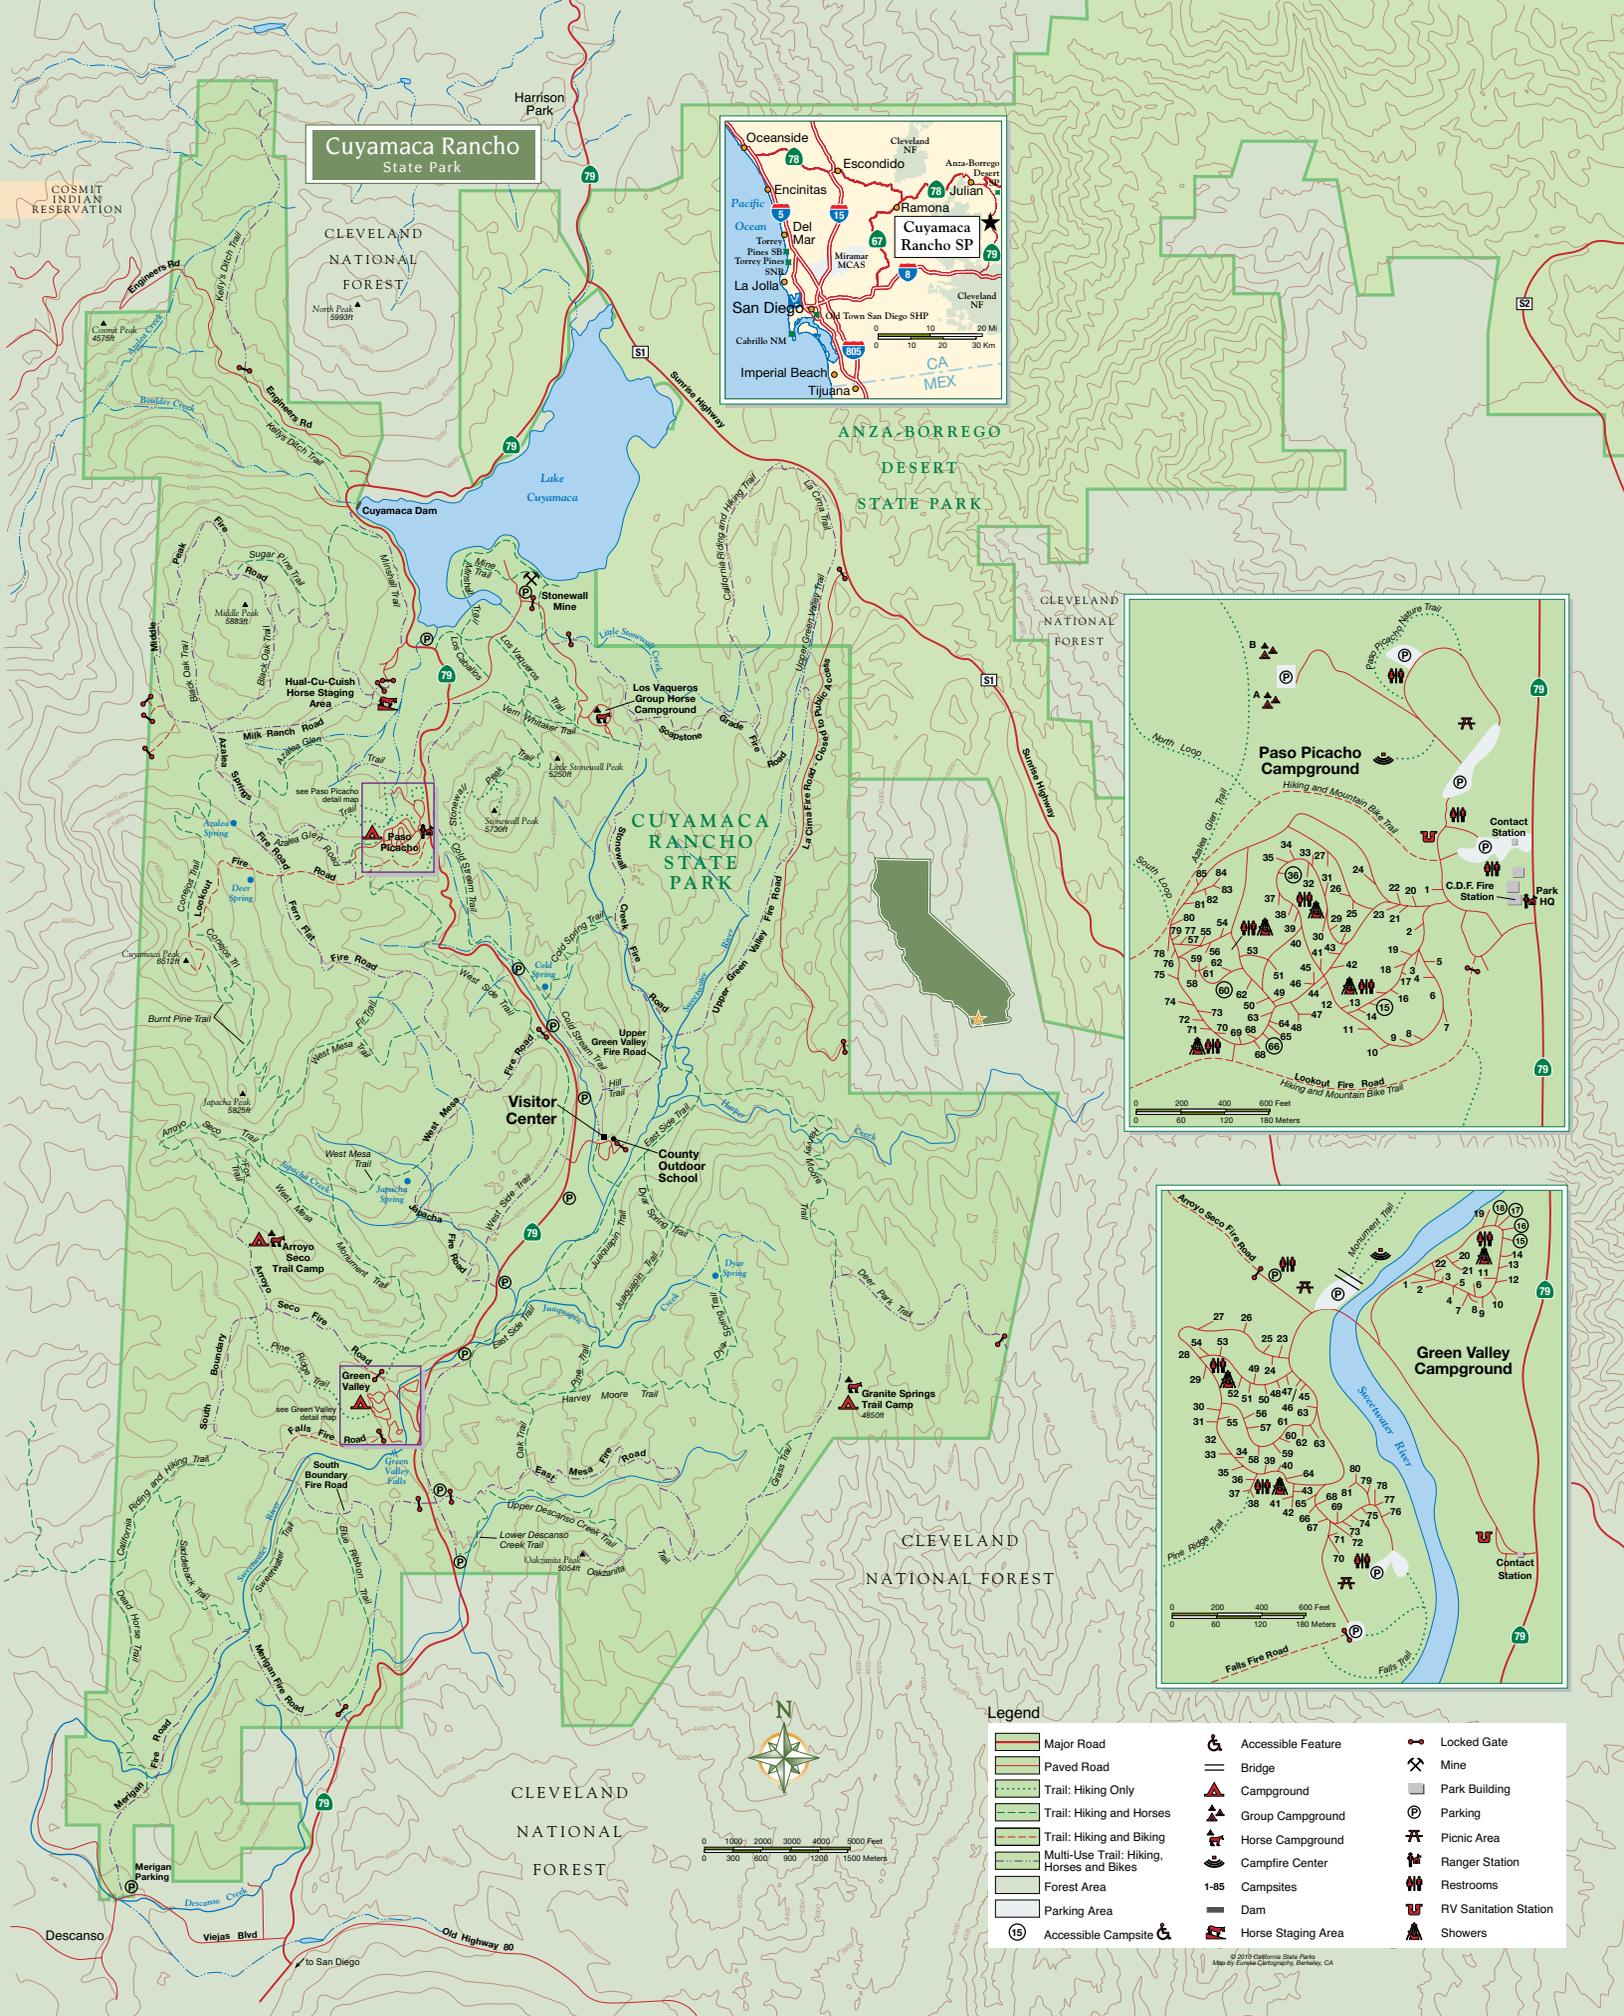

Live Oak cabin and some restrooms at the family campgrounds and picnic areas are accessible. For accessibility updates, visit <http://access.parks.ca.gov>.

NEARBY STATE PARKS

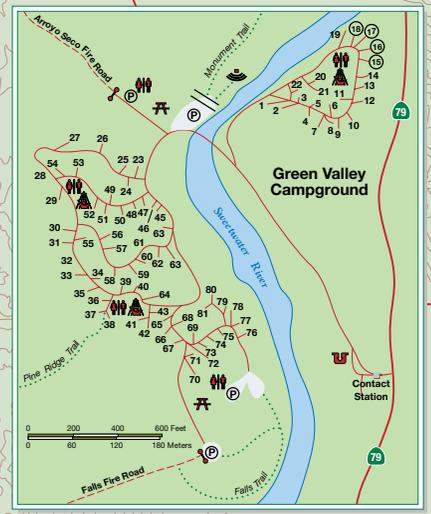

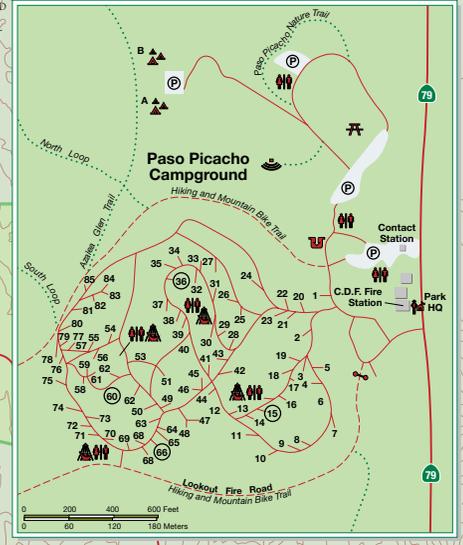

- Anza-Borrego Desert State Park

Escondido, CA 92027 (760) 737-2201

PLEASE REMEMBER

- Please pay fees for camp and picnic sites at the self-pay stations.
- Build fires only in the park fire rings provided. Ground fires pose a serious threat, and leave unsightly scars.
- All natural and cultural park features are protected by law and may not be disturbed or removed. Please tell park staff about any artifacts you may find, but leave them in place.
- Dogs must be kept on a six-foot-maximum leash and remain in your tent or vehicle at night. Dogs are allowed in picnic areas and in the campgrounds (except the primitive trail camps), but they are not allowed on trails or in park buildings. Please clean up after your pet.
