

Introduction to Replacement Bridge Planning and Design

Questa Engineering Corporation
Sydney Temple, P.E.

6/28/2011

1

Introduction

Today's Talk:

- ◆ Basic site analysis and investigation
 - Geotech, Hydrology, Roadway, etc.
- ◆ Bridge designs types
 - Abutment/Foundation types
 - Bridge Deck types
- ◆ Design exercise
- ◆ Permits and review processes
- ◆ Construction issues
- ◆ Retrofits

6/28/2011

2

Why Bridges?

- ◆ Bridges have better
 - Flood Control performance
 - Less back water, better conveyance, safer
 - Geomorphic flexibility
 - Maintains sediment transport, vertical movement
 - Fisheries benefits
 - Removes migration barriers, facilitates movement, provides habitat

6/28/2011

5

6/28/2011

7

Multi-Discipline Approach

- ◆ Structural Engineering ◆ Hydrology Science
- ◆ Geotechnical Engineering ◆ Hydraulic Engineering
- ◆ Civil Engineering ◆ Biologic Evaluations
- ◆ Planning and Permitting ◆ Geologic Evaluations

6/28/2011

8

Basic Design Approach

- ◆ Investigate the site
 - Survey and geotech
- ◆ Layout bridge location
- ◆ Bridge Deck and foundation design
- ◆ Hydraulic Design
- ◆ Approach design
- ◆ Permitting
- ◆ Construction

6/28/2011

9

6/28/2011

10

Site Survey Data

A GOOD SURVEY IS NEVER A WASTE OF MONEY!!

- ◆ Survey site
 - General topographic for 100 feet upstream downstream min.
 - Channel slopes
 - Long profile at 350 feet upstream and downstream
 - Make sure controlling tailwater zones are surveyed
 - Existing structure data
 - Slope, shape, dimensions, top of roadway, top of culvert, apron slopes and wing wall geometries
 - Make sure bridge approach roads are surveyed including edge of pavement, roadway crowns, super elevations
 - Map utilities and nearby structures

6/28/2011

11

Site Analysis

- ◆ Site analysis:
 - Layout
 - Geotechnical Considerations
 - Hydrologic/Hydraulic Studies
 - Geomorphic Considerations
 - Biologic issues

6/28/2011

12

Bridge Layout – Structure Positioning

- ◆ Right of Way
- ◆ Jurisdictional determination
- ◆ Alternative alignments
- ◆ Approaches
 - Vehicular
 - ADA Requirements
- ◆ Traffic/Roadway design

6/28/2011

13

Roadway Design Issues

- ◆ Alignments
- ◆ Approach elevations
- ◆ Vertical Curves
- ◆ Will you need embankments or other retaining structures

6/28/2011

14

Geotechnical Studies

- ◆ Investigative procedures
- ◆ Drilling rigs and types
- ◆ Constraints
- ◆ Report preparation

6/28/2011

17

Types of Geologic Investigations

- ◆ Regional geologic and seismic conditions
- ◆ Soil conditions
- ◆ Geologic hazards
- ◆ Subsurface exploration
- ◆ Analysis
- ◆ Design recommendations

6/28/2011

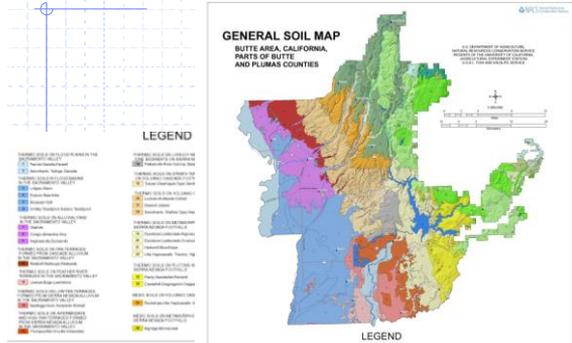

18

Local Geologic Map Detail of Cambria Area

19

Soils Map

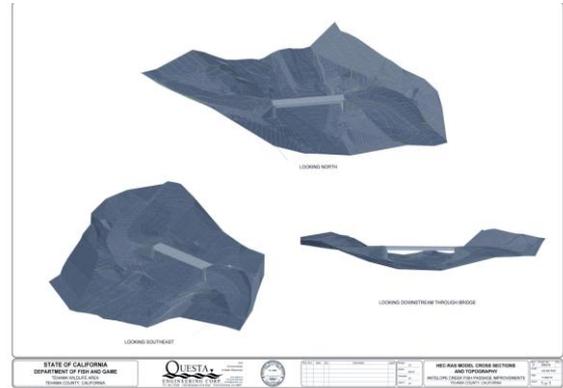

Regional Seismicity and Geology Review

- ◆ Alquist-Priolo Earthquake Fault Zone Maps
- ◆ Seismic Hazard Zone Maps
- ◆ Liquefaction
- ◆ Seismic Induced Slope Instability
- ◆ Seismic Shaking Hazard Maps
- ◆ Regional Geologic Mapping
- ◆ Regional Slope Stability Mapping

6/28/2011

21

6/28/2011

22

6/28/2011

23

Drilling, Logging and Sampling of Boreholes

- ◆ Exploratory holes 10 feet into bedrock or required depth in soils
- ◆ Soil sampling at depth intervals to collect samples for analytical testing
- ◆ Perform Standard Penetration Test (SPT) sampling for strength characteristics (I.e. Blow Counts/ft)
- ◆ Determine groundwater levels

6/28/2011

24

Drill Rigs

- ◆ Type of rig depends upon many factors;
 - Depth of hole,
 - required rock penetration,
 - potential for hole collapse,
 - sampling requirements, and
 - access restrictions

6/28/2011

25

Drill Rigs

- ◆ Portable Augur Drill Rig
- ◆ Truck/truck mounted Augur Drill Rig
- ◆ Mud or Air Rotary Drilling
- ◆ Cone Penetration Testing

- ◆ Re: Specialized drilling services may take time to schedule

6/28/2011

27

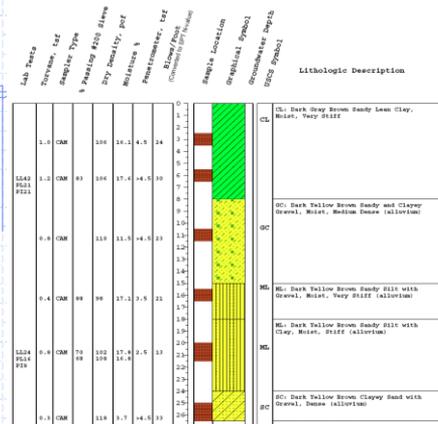

Types of Drilling

Reviewing Boring Logs

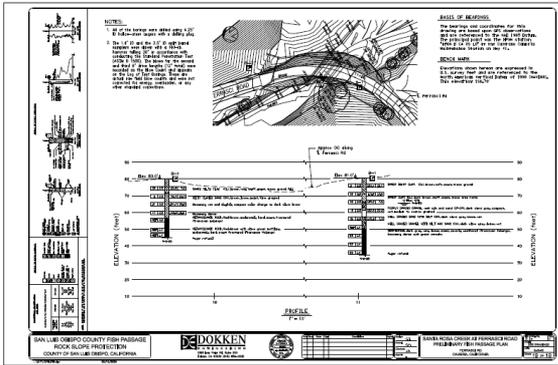

- ◆ Logs of test borings show summaries of data
 - Soil density
 - Soil material
 - Blow counts
 - ◆ Fewer blow counts - looser less dense material
 - ◆ High blow counts - solid denser soil conditions
 - Groundwater levels

6/28/2011

29

30

6/28/2011

31

Foundation Type Feasibility Review and Laboratory Testing Request

- ◆ Review Logs of Boreholes and Determine Feasible Foundations based on subsurface conditions
- ◆ Determine Samples and Testing Protocol for Soils Laboratory

6/28/2011

32

Geotechnical Engineering Analysis

- ◆ Foundation bearing capacity
- ◆ Site seismic design criteria
- ◆ Pier Friction Capacity
- ◆ Liquefaction Analysis
- ◆ Site Geology and Soil Conditions
- ◆ Geologic Hazards

6/28/2011

33

Session Break

6/28/2011

34

H & H Investigations

- ◆ Hydrology data
- ◆ Hydraulics analysis

6/28/2011

35

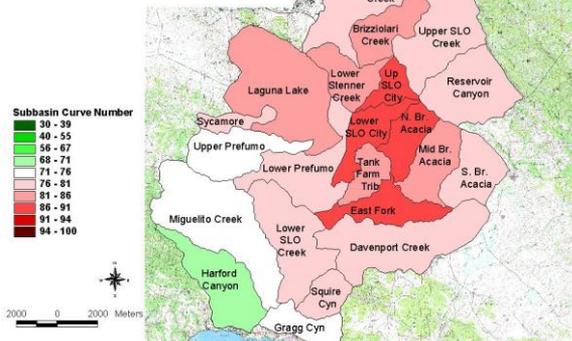

Hydrologic Analysis

- ◆ Hydrology Information
 - Gage data
 - Hydrologic models
 - Comparable basin analysis
 - Governmental sources; Caltrans, FEMA, and County Flood Control Agencies

6/28/2011

36

Existing Conditions Composite Curve Numbers

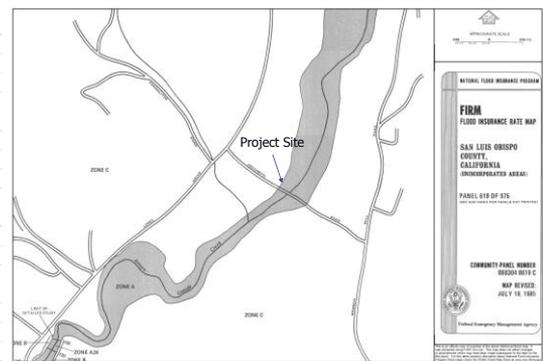

Hydraulic Analysis

- ◆ Hydraulic analysis
 - FishXing
 - HEC-RAS
 - Alternative Hydraulic models
- ◆ Must have the ability calculate back water impacts

6/28/2011

38

6/28/2011

40

Hydraulic Modeling

- ◆ HEC-RAS
 - Good design tool accepted by most if not all agencies for analysis
- ◆ Requirements:
 - Accurate topographical survey
 - Surveyed benchmarks
 - Hydraulic structures
 - ◆ Bridge soffit/roadway measurements
 - Slope

6/28/2011

41

Design Water Surface elevations

- ◆ Hydraulic Design Criteria and Freeboard
 - Vary by Jurisdiction
 - 50-year with 2 ft of freeboard
 - 100-year with at least 1 ft freeboard
 - Levees – three of freeboard

6/28/2011

42

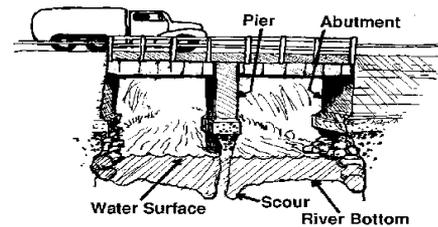

Bridge Design and Impacts

- ◆ Goal: shortest bridge with the least amount of impact
- ◆ Design Criteria
 - Passes design flows with freeboard
 - ◆ 50-year with 2 ft of freeboard
 - ◆ 100-year with at least 1 ft freeboard
 - No increase in flood threat
 - Minimizes scour and deposition

6/28/2011

43

Bridge Scour Analysis

6/28/2011

44

Bridge Scour

- ◆ Event Based scour vs. Long-term scour
 - Hydraulic Engineering Circular (HEC) 18, "Evaluating Scour at Bridges," FHWA-IP-90-017
 - Geomorphic evaluations

6/28/2011

45

Geomorphic Analysis

- ◆ Vertical & Lateral Creek Movement
- ◆ Sediment Transport
- ◆ Bankfull channel
- ◆ Low-Flow (scour line) Channel

6/28/2011

47

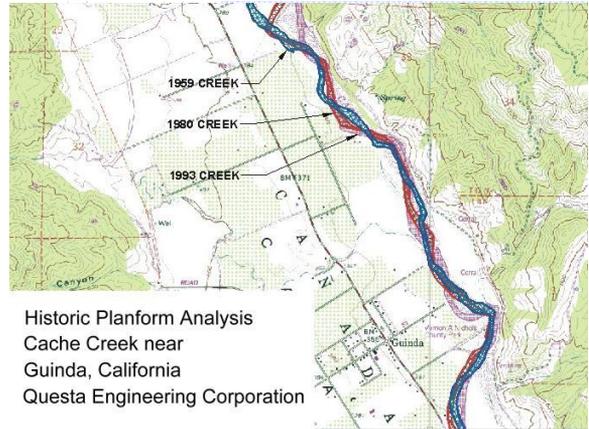

Determining Vertical and Lateral Creek Movement

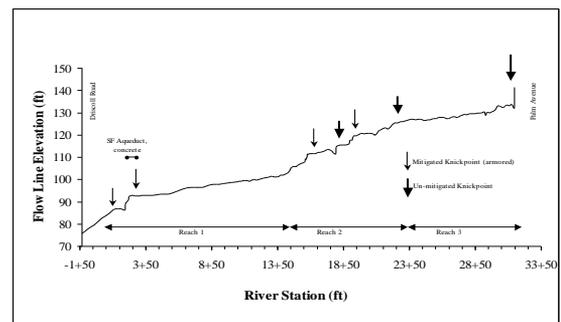

- ◆ Historic profile analysis
- ◆ Existing condition long profile analysis
- ◆ Historic air photo examination
- ◆ Historic topographic map analysis

6/28/2011

49

Longitudinal Profile Analysis

Longitudinal Profile Analysis

- ◆ Determines average slope through the site
- ◆ Assesses offsite bed slope issues
- ◆ Places project site in context with upstream downstream areas
- ◆ May indicate bed aggradation

6/28/2011

53

Fall 2003

March 2005

6/28/2011

54

Design Breakdown

- ◆ Foundation design
- ◆ Bridge deck design
- ◆ Channel Design

6/28/2011

55

Bridge Foundation Considerations

- ◆ Required Load Capacity and Anticipated Uses
- ◆ Site Conditions & Geotechnical Investigations
- ◆ Foundation Types
 - Spread Footings
 - Driven Piles
 - Drilled Cast-In-Place Piers
- ◆ Economic Analysis
 - Capacity and Service Life versus Cost
 - Typical Construction Costs

6/28/2011

56

Required Load Capacity and Anticipated Uses

- ◆ Public Trails - Pedestrian/Bicycle/Equestrian/Disabled Users
- ◆ Light-Duty — Typically Residential Automobiles/Light Trucks
- ◆ Highway Traffic — Heavy Trucks HS20-25 loads (AASHTO Load Standards)

6/28/2011

57

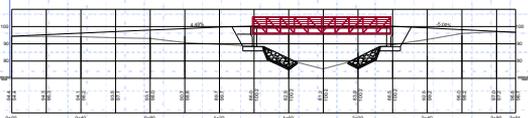

AASHTO & Caltrans

- ◆ American Association of State Highway and Transportation Officials
 - National Association which establishes and promotes highway construction and safety standards.
- ◆ California Department of Transportation
 - Manages State Highway System
 - Issues permits for encroachment into state owned highways and properties

6/28/2011

58

Typical Light-Duty Bridge Crossing Profile

6/28/2011

59

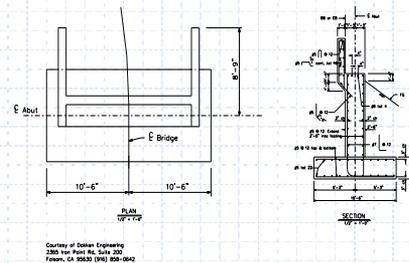

Foundation Types - Spread Footings

- ◆ Relatively shallow reinforced concrete mats to distribute bridge loads over wide area of supporting soils.
- ◆ Advantages
 - Typically least expensive option
 - Minimal equipment mobilization requirements
- ◆ Disadvantages
 - Not suitable over soft or liquefiable soils
 - Minimal resistance to undermining or slope instability
 - Moderate to heavy site disruptions

6/28/2011

61

Typical Spread Footing Bridge Foundation

6/28/2011

62

Foundation Types - Driven Piles

- ◆ Tubular and Sheet Steel, Reinforced Concrete or Composite Piles driven into soils using a dropped weight or piston hammer, applied typically in marine settings.
- ◆ Advantages
 - Minimal site disruption
 - Provides support over soft or variable subgrade conditions
 - Applied in areas prone to flooding or with very soft soils
- ◆ Disadvantages
 - Requires mobilization of large equipment and materials
 - Requires minimum embedment depth into soil

6/28/2011

63

Reinforced Concrete Piles Being Installed in a Marine Environment

6/28/2011

64

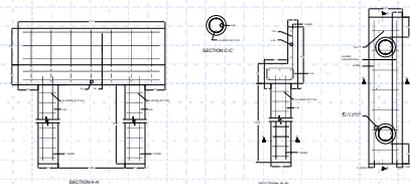

Foundation Types - Drilled Cast-In-Place Piers

- ◆ Drilled holes filled with cast-in-place reinforced concrete piers.
- ◆ Advantages
 - Typically provides greatest resistance to vertical and lateral loads
 - Provides excellent resistance to scour
 - Used in steep and/or unstable slope areas
- ◆ Disadvantages
 - Typically highest cost
 - Difficult to apply in areas of shallow ground water or loose soils
 - Moderate site disruptions

6/28/2011

65

Drilled Pier Foundation Design for Timber Framed Bridge

6/28/2011

66

Photo of Drilled Cast-In-Place Pier Installation

6/28/2011

67

Economic Analysis

◆ Capacity and Service Life versus Cost

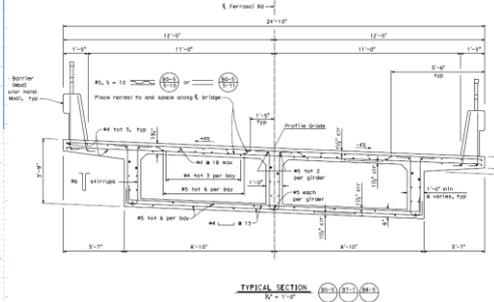

◆ Typical Cost for Light-Duty Bridges

- \$1,000/ft for pre-fabricated steel bridges w/ wood decking
- \$2,000/ft installed including design and foundations

6/28/2011

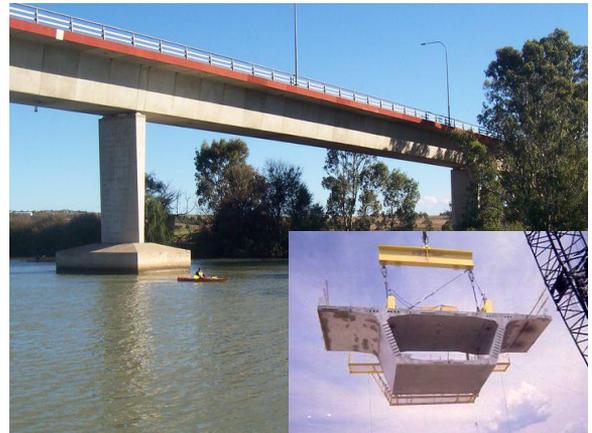

68

Concrete Box Girder

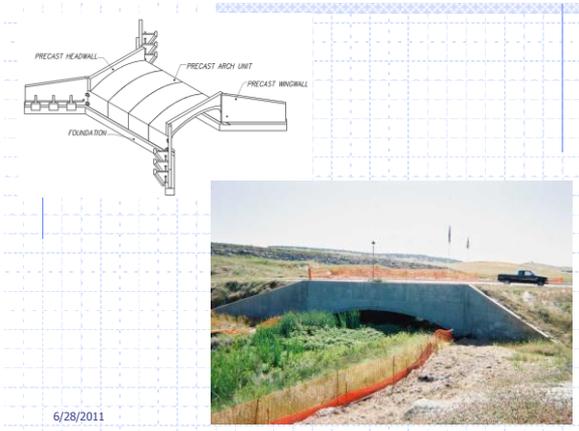

6/28/2011

69

6/28/2011

72

6/28/2011

Bridge Widths

- ◆ 12 foot width lanes plus 2 feet of railing/curb
- ◆ Single lane = 18 feet, 14 feet between railings/curbs
- ◆ Two Lane = 28 feet, 24 feet between railings/curbs

6/28/2011

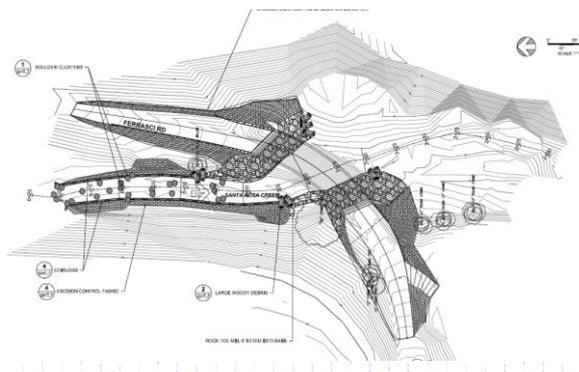

75

Planning Level Bridge Costs

- ◆ Pedestrian Bridge construction costs in northern California
 - \$125-\$140 per square feet (sf) for cast in place concrete,
 - \$115-\$150 per sf for prefabricated bridges.
 - \$1,500 per lineal foot
- ◆ Traffic Rated Bridges
 - Two Lane light to medium traffic
 - \$350-500 sf
 - Major arterial structures
 - \$600-\$750 sf

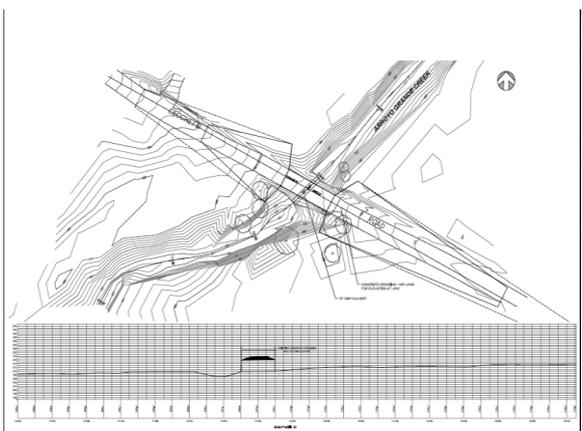

6/28/2011

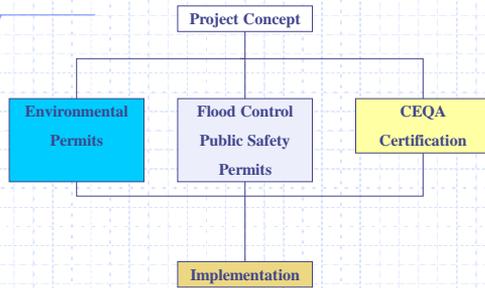

76

6/28/2011

77

6/28/2011

79

Permits and Approvals

- ◆ Documents needed for permitting
- ◆ Permitting procedures
- ◆ Design Review
- ◆ Construction implementation
- ◆ Construction management and inspection

6/28/2011

80

Project Permit Documents

- ◆ Site Map
- ◆ Water of the USCOE Jurisdictional Area
- ◆ Project Description
 - Detailed
 - Alternatives examined/project justification
 - 30% design drawings
- ◆ Project Analysis
 - Technical analysis or separate back up design memorandum (H&H, Geotech, etc.)
- ◆ Biologic Reconnaissance

6/28/2011

81

Project Description

- ◆ Project Justification Site plan
- ◆ Project channel bed profiles
- ◆ Project cross section views
- ◆ Habitat enhancement features
- ◆ Limits of work
- ◆ Area of impact
 - USCOE, riparian area, vegetated area
- ◆ Determination of cut and fill quantities

6/28/2011

82

Environmental Permits

- ◆ U.S. Army Corps of Engineers 404 Permit
 - Endangered Species Act Consultation
- ◆ California Department of Fish & Game Streambed Alteration Agreement
- ◆ Regional Water Quality Control Board
 - Water Quality Certification & General Stormwater Construction Permit
- ◆ Coastal Development Permit

6/28/2011

83

USCOE Permits

- ◆ Reviews application and notifies National Marine Fisheries Service (NMFS) and/or US Fish and Wildlife Service (USFWS)
 - May ask for formal or informal consultation
 - May require preparation of a Biologic Opinion (BO) and/authorization for take
 - NMFS will review Fish passage analysis

6/28/2011

84

Streambed Alteration Agreements

- ◆ CDFG engineering staff will review project fish passage analysis
- ◆ Must have CEQA completed to issue
- ◆ Includes impacts to riparian areas

6/28/2011

85

6/28/2011

86

Biological Reconnaissance

- ◆ Special-Status Species
- ◆ Existing Habitat ID and Mapping
- ◆ Proposed Habitat Mitigation
- ◆ OHWM/Wetland Delineation
- ◆ CNDDDB Search

6/28/2011

87

Coastal Development Permit

- ◆ Usually processed through the County
- ◆ May require architectural review
- ◆ May require separate monitoring protocols

6/28/2011

88

Public Safety Permits

- ◆ County/ City Building Permits
 - Structural & Roadway Design Review
- ◆ Caltrans
 - Encroachment permits

6/28/2011

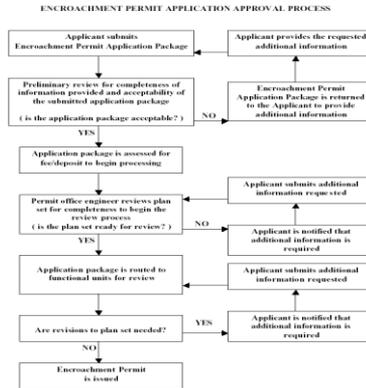

90

Caltrans Encroachment Permit

- ◆ Primarily concerned with impacts to their facilities and safety
 - Reviews design storm hydrology and hydraulics
 - Erosion and bank stabilization in and around their facilities
 - Maintenance responsibility

6/28/2011

91

92

County/City Review

- ◆ Reviews detail plans and calculations
 - Roadway design
 - Structural design
 - Geotechnical design
 - Flood control

6/28/2011

93

CEQA Review

- ◆ Categorical Exemption
- ◆ Initial Study Preparation
- ◆ Mitigated Negative Declaration
- ◆ EIR/EIS
- ◆ Lead Agency
 - City or County
 - CDFG for some grant funded projects

6/28/2011

94

Permit Timeline

- ◆ 6 month is likely minimum
- ◆ 1 year is not out of the question
- ◆ NMFS and USFWS have 135 days
- ◆ CDFG - 30 days
- ◆ Coastal Development Permit

6/28/2011

95

Construction Factors

- ◆ Site and Channel Access
- ◆ Work Conditions
- ◆ Restricted Seasons
- ◆ Mobilization and Staging Areas
- ◆ Materials Storage Areas
- ◆ Dewatering
- ◆ Limits of Work

6/28/2011

96

Construction Issues

Access & Staging

- ◆ How are you going to get to the site?
- ◆ Dewatering issues
- ◆ Do access roads need to be built?
- ◆ How will machinery move around the site?
- ◆ Where will work be staged?
 - Material and spoils storage
 - Maintenance and fueling areas
- ◆ Delivery truck access and traffic issues?

6/28/2011

97

Construction Sequence

- ◆ Water control
- ◆ Foundation construction
 - Drilling
 - Concrete forming
- ◆ Channel demo and grading
- ◆ False work/deck forming
- ◆ Pre-stressing/curing
- ◆ Installation
- ◆ Approaches
- ◆ Erosion control

6/28/2011

98

Construction Inspections

- ◆ Inspections are very important - use construction inspection forms
- ◆ Extensively photograph work progressing
- ◆ Inspection Milestones:
 - Staking and job layout
 - After clearing and grubbing, new topo may be taken to estimate quantities
 - After rough grading
 - During rock placement/willow staking
 - During LWD/in-stream structures placement
 - Check step pool elevation and depths as you go!!
 - After erosion control installation; during and after planting and irrigation installation

6/28/2011

99
